Dazzling Dynamites

Project Overview

Our Project idea is to develop a mobile app, ***Recipe Zone*** that shows the user about the instructions on how to prepare a specific food item along with the additional information like the ingredients, nutrients, servings, and preparation time.

The user can use the dropdown menu to select a food recipe.

After which the user can add a ***specific food recipe to the wish list*** if they like the recipe and scroll through the wish-listed food recipes later.

Software Requirements

Tools used

- ***Expo CLI*** and ***React Native*** is used to Build the Application.
- ***Firebase User Authentication*** is used to Authenticate the existing user and to create a new user.
- ***Firebase Database*** is used for the Mobile Backend.
- ***Edamam Recipe Search API*** is used extract the recipe details along with the ingredients, nutrients, and servings for a particular food item.
- ***Firebase Analytics*** is used for data analytics and research purposes.

What has changed since the midterm?

- Actual Development of the Application was initiated by setting up the ***Development Environment***.
- All the ***packages/dependencies in React Native*** were installed successfully. We have designed a new logo for our application.
- ***Class Diagram and Object Diagram*** helped us in determining the attributes required under each class and the visibility of them.
- We were having issues with the RecipesAPI , and later we found a new Recipe Search API called as ***Edamam API*** which was suitable for our requirement.
- ***Firebase Configuration*** was done to ensure that the mobile backend integration is successful.
- We made use of the ***Minutes of meeting*** to update the progress of the application each week , which was helpful in meeting the project deadline.
- We were able to gather all the ***Functional and Non-functional Requirements*** of the application.

Project Demonstration

How to Deploy the App?

There are two ways to deploy the application as given below:

Approach 1:

By using the ***git clone*** to clone the project repository and then executing the app.

Approach 2:

By downloading the app using ***Expo Go Link*** or by scanning the ***QR code*** and opening the app in Expo Go.

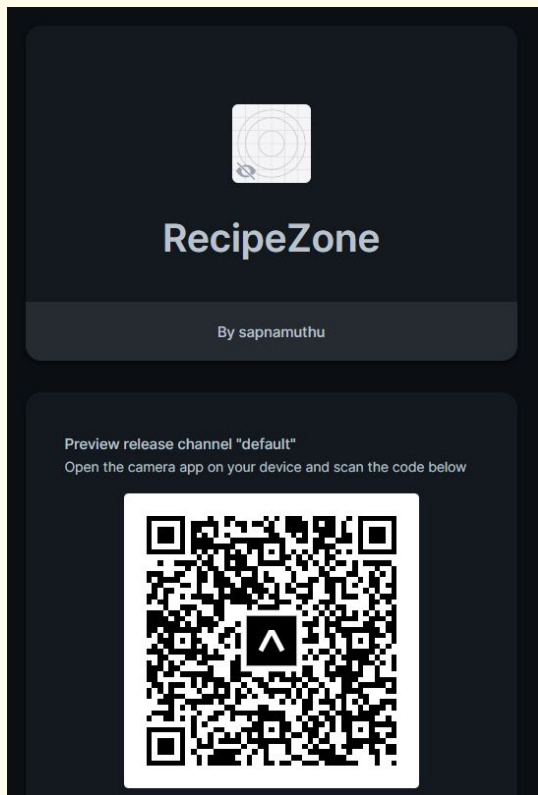

Deploying the App

Run Instructions

To clone and run this application, you'll need [Git](#), [Expo CLI](#) and [Node.js](#) (which comes with [npm](#)) installed on your computer. From your command line:

```
# Clone this repository
$ git clone https://github.com/SapnaMuthu/GVSU-CIS641-Dazzling-Dynamites/
# Go into the repository
$ cd GVSU-CIS641-Dazzling-Dynamites
$ cd RecipeZone
# Install dependencies
$ npm install
# Run the app
$ expo start --tunnel
# You will see a QR code and scan the QR code in the Expo GO to see the App.
```

Downloading the App

Download

1. You can [run](#) the latest installable version of Rezo App for Android .
2. You will need to open the link and download Expo Go from Playstore to run the App.
3. After that you can Sign up for a new account, and Login to the Home Screen.
4. Select a recipe from an available list and you will see the results displayed in the screen.
5. You can add a recipe to Wishlist and delete an item from Wishlist.
6. You can click on the Logout button on the top left to exit from the app.
